

PROGRESS DRIVES YOUR BUSINESS FORWARD

/// VOLLMER WORLDWIDE

V@ screen

Know what's going on. All the relevant machine parameters at a glance and under your control. Fully networked and always right up to date – on any end device. The ability to obtain and view information quickly ensures high transparency.

V@ check

Experiment, explore, optimise. Run simulations quickly and easily without wasting material. Use analyses and evaluations to reduce machine downtimes.

V@ boost

Unlock your machine's full potential. Use software tools to optimise its performance according to the workpiece to be machined and expand its range of standard functions.

V@ guide

Identify faults before they occur. Digital modules and automated digital communication processes enable preventive maintenance to be carried out and knowledge to be shared. The smart way to receive recommendations and prevent downtimes.

The desire to offer our customers maximum benefit has been the driving force behind our innovations under the "V" banner for over 100 years and is the principle behind the digital transformation at VOLLMER.

True to this promise, our engineers and developers are currently working on a whole host of digital solutions, tools and services packed with functions and features. Reduced downtimes, predictive maintenance, maximum system availability and the utmost transparency throughout the process – these are just some of the benefits you can expect from the world of **V@dison**. We never stop striving to bring you tangible added value in terms of greater flexibility, greater profitability and greater efficiency.

////////

The "dison" in **V@dison** stands for "digital solutions". But perhaps it also reminds you of the famous inventor Thomas Alva Edison, who worked hard to make electricity available to the masses and offer people solutions that made their lives easier. This is precisely the motivation behind our new **V@dison** product range too: Digital solutions to bring you added value.

OUR SOLUTIONS FOR
DIGITALISATION

PRECISION IN TRANSFORMATION

Make your processes more flexible and more efficient. Utilise important information faster and make it available more quickly. Identify faults in advance and optimise processes.

Boost your company's growth by integrating and making use of smart technologies. In the future, **V@dison** will offer you specific tools and solutions in the four key areas of the digital transformation.
